Dedicated servers with root access, semi-managed with free tech support.

Our range of dedicated servers are the most powerful products available. We supply, setup and manage servers to your specification with free technical support.

If you have a website which requires a dedicated server of its own or you are starting a demanding service such as a downloads portal or video streaming, we can support and supply a server for your needs.

Any Linux OS is available on request, we will setup and configured the OS to your requirements. We can pre-install cPanel control panel, Direct Admin, Plesk or any other server management panel you require.

Free migration of your existing websites to a dedicated server is available.

We do not charge any setup, cancellation or technical support fees.

- **Find out more about our data center and network here .**
- **If you are looking for root access at a cheaper price, see our VPS server plans here .**
